100 Alien Invaders: Animals And Plants That Are Changing Our World (Bradt Wildlife Guides)

Synopsis

100 Alien Invaders exposes one of the greatest threats to the planet after climate change and overpopulation. Animals and plants are perfectly harmless in their native areas, but become a menace when they colonize new territoriesâoften out-competing native species and, in some instances, drastically affecting the ecology. What's more, it is humankind that is largely responsible. Some species, such as killer bees and cane toads, are obvious terrors. Others, such as the water hyacinth, pose a more insidious threat. Read this book and you'll never look at house sparrows or hedgehogsÂ in the same way again. 100 Alien Invaders is a warts-and-all exposÃ© of 100 of the most destructive alien species on the planet.Â

Customer Reviews

'Everything you need to know about the world's most successful and destructive species. Never underestimate a mollusc...' Kate Humble, TV presenter I commend this handsomely produced book, and congratulate all involved in its publication. It will, I'm sure, stimulate awareness and appropriate action in a compelling way on one of the most important biological issues of our time. Professor Stephen D Hopper Director - Royal Botanic Gardens, Kew 'Offering a full-colour exploration of non-native terrestrial species and the devastating, often unexpected, effects they can have on the world's delicate indigenous eco-systems. Glossy but sobering.' Wanderlust

Gill Williams is a travel and natural history journalist with more than 30 years experience. She runs greentravelguides.tv, an internet TV channel showing people how to travel without trashing the planet.
