Clinical Pharmacology (Quick Look Series)

Synopsis

This book presents the basic principles of pharmacology and pharmacokinetics with emphasis on their clinical importance. It introducesÂ clinically relevant pharmacologic agents used in small and large animal practice and includes an overview of key concepts in pharmacology including basic principles of pharmacodynamics, physiological uptake and nervous system perception. Various types of drugs are discussed including tranquilizers, sedatives, and opioids. Pharmacologic effects side effects, drugs interaction and species differences are illustrated with emphasis on figures, charts and diagrams.Â The text is primarily intended for vet students, tech students, and animal science students taking their first clinical pharmacology course, but it will also be useful forÂ residents and interns for board review, veterinary technicians as well as practicing veterinarians for a quick reference. Published by Teton New Media in the USA and distributed by CRC Press outside of North America.

excellent

I would recommend this book for anyone who wants a reference that is very short and concise. It's not necessarily going to cover everything you need to know. It breaks drugs up by categories and

spends about 1-2 pages on them. The first paragraph gives a background on physiology, and then the rest focuses on drug mechanisms and uses. The figures in the book are large and focus on location of action of the different drugs mentioned.
