Customer Reviews

Here are some of the comments about my first book that people left on FaceBook... Hey John! I just

downloaded and read your book to my daycare kids. They LOVED it! Especially my little guy, he's aaaaa nature, can't keep him inside. I'm sharing with all my FB peeps and my daycare parents as well. Way to go, and good for you! Best wishes!!! John, I read your book prior to letting the kids read it. It was a good read and I definitely learned some things myself. I look forward to the kids' reading it. John, I downloaded your book to my phone and I will add it to my kid's tablets they are getting from Santa. Thanks! Please purchase and enjoy this book with your family!

As a child, John grew up running wild in rural Wisconsin where he discovered mystery after mystery. His summers were spent exploring nature and the library. He would pore over the books in the 599 section (remember the Dewey Decimal System?) searching for answers to the questions he had about the things he'd seen out in the woods. John's love for animals continued and expanded in college where he got a degree in animal science and Teaching Certification. For the next 8 years he taught high school Science and was one of the school's favorite teachers. During that time, he lived in a tiny log cabin he built himself in the middle of the woods. He had no running water, no electricity and no TV. Every day he would journal about his life and the animals around his cabin. Much of this series will be based on his love for nature. Now, John gets to pass on a life-time of love, learning and teaching to people all over the world through his books. He truly hopes you are inspired to appreciate this beautiful world we live in.

I love the straight and to-the-point nature of the information covered in this book. I know it's technically A Kids Book, but sometimes I just want facts, man! This book has lots of them and I appreciate that. I really feel that John appreciates snakes, as well as the rest of this so-called "Natural World", so I in turn appreciate learning by observing, with this book, his perspective. His individual understanding is partially gleanable in the totality of the information presented, as well as in the unique organizational structure of his presentation. I can't wait for the other titles; I love learning and I understand, and hope, that most kids do too. I'm very glad to see such a product offering. Let's be honest: we're pretty much all kids at heart, and the Natural World's environment within which we all live is profoundly powerful, important, and all-encompassing; why would anyone (of any age) NOT be interested in learning more about these amazing topics? This book is a great price and a quick download, both literally and figuratively; it is a tremendous value!

One of the best teaching techniques for any student (child or adult) is the ability to connect new

information to a reader's background knowledge. Readers of "Snakes!" will be pulled in by the amazing photos, but they will learn from Yost's artful way of comparing snakes to humans and other animals. I am hoping this is just the beginning for this author...great book.

This review is from my 5 year old son: "I really liked the part about the Cobra's because they are my favorite kind of snake. I also liked how I learned to move like a snake. The Black Racer was really cool too. I had never heard of one before. I hope Mr. John writes another snake book." As you can see, he really enjoyed it. Thanks.

With the new adoption of Common Core standards to our curriculum it's even more important than ever to expose more nonfiction books to our students and children. The sophisticated photography grabs my student's attention and focuses their interest and motivation to read... even my struggling readers are motivated to read and use the illustrations to clarify text and maintain interest throughout the book.

I have two daughters and a son and they all read this within the first couple of days we had it. The cover catches your eye and it's an easy to read, informative book. Even though I am a Discovery, Nat. Geo. Wild junkie I was amazed by the number of interesting things I learned about a variety of snakes species. -Excellent formatting, very well put together..looking forward to the other books in the series by this author

Great pictures, nice and big. Plus easy to read captions. Love the clickable table of contents making it easy to find pages. Interesting information about different snakes. I learned how a snake moves and a snake doesn't really outgrow its skin. The pictures are crisp and sharp and show great action to make conversation with my daughter easy and fun. I HIGHLY recommend this book.

This book offers exciting, scientific information about snakes with a writing style that is appropriate and understandable for younger children, but challenging enough for grade-level readers. The photos were vibrant and portrayed the features and mannerisms of the different types of snakes. Our 5-year-old son listened actively through the whole book and asked questions - he loved it!

Great pictures. A light read for small people.
