Plants And Society

Synopsis

This introductory, one quarter/one-semester text takes a multidisciplinary approach to studying the relationship between plants and people. The authors strive to stimulate interest in plant science and encourage students to further their studies in botany. Also, by exposing students to society's historical connection to plants, Levetin and McMahon hope to instill a greater appreciation for the botanical world. *Plants and Society* covers basic principles of botany with strong emphasis on the economic aspects and social implications of plants and fungi.

Customer Reviews

Karen McMahon is a professor at University of Tulsa. Estelle Levetin is a professor at University of Tulsa.

Great textbook and it was delivered on time.

Works perfect for class, the description said that it may not come with associated media. That is correct it didn't come with any. However, I don't think it does have any associated media as I have checked with others who own this book. I thought I might mention that for people who may have turned this listing down due to the misconception that there might have been something missing.

Great!

I got this for a class, but it had interesting information if you like learning about plants. I enjoyed the way the information was presented and it was easy to navigate and find what you were looking for using the index.

I'm sure this would be a good textbook for a high school class, but it was nowhere near detailed enough to be of any use to my botany course. This may have just been an error on my college's part, however.

Very timely delivery. Book in more than acceptable condition. Thank you very much. Very pleased.

Rented Textbook

Just what I needed!
