Customer Reviews

Offers a multi-disciplinary and cross-disciplinary perspective. this anthology offers a collection of 33 readings on primate behavior, ecology, and conservation — originally published in Natural History Magazine.

Richard A. Nisbett is a disease ecologist who works at the interface of biological anthropology (nonhuman primate field studies), community ecology (especially tropical ecology), and zoonotic diseases (in particular, viruses and cross-species transmissions). His career as a teacher and scholar has been focused on transdisciplinary approaches in community ecology and community health. He has taught at several universities in departments of Anthropology, Evolution & Ecology, Human Anatomy, Tropical Studies, and Public Health.

This is such a great resource. There are multiple articles about primates, covering a wide range of topics. I initially needed it for a primatology course, but I will be keeping it to reference later.

Lovely essays on primates.

good read

arrived in good condition

This was bought as required reading for a college student. The price was right, and it was shipped quickly to its destination..

Natural History magazine has published a wealth of information about primates, written by leading experts in field research. Students of primatology, and anyone interested in animal behavior and ecology, will find this anthology relevant and informative. These studies demonstrate the diversity of our closest animal relatives and the intricacies of their lives and relationships amongst themselves and with other species. The writings of field scientists such as Christophe Boesch, Robert Harding, Dawn Starin, Thomas Struhsaker and Patricia Wright cover wide taxonomic and geographic ranges. The editors' glue that effectively binds these essays together is the excellent prefacing overview accompanying each section (Behavior, Community Ecology, Diet, Reproduction and Conservation). These writings demonstrate the skills of biologists in translating field observations into literate and eminently readable images of their primate subjects. This anthology provides valuable testimony to the contributions of field studies in understanding our primate kin-- their context in nature, and the strategies they employ for coping with daily life and the encroachments of mankind. Phillip T. Robinson - Society for the Renewal of Nature Conservation in Liberia, West Africa

This book is a wonderful introduction to primate behavior, ecology and conservation. A collection of articles originally published in Natural History magazine, this book provides a perfect balance of the above topics in primatology. If you are just getting started in the field or you are simply curious about our primate cousins this book is great. If you are a seasoned primatologist, this is a fun weekend read!
