## Synopsis

The handbook is a compact but clear and comprehensive guide to all aspects of dialysis, from preparing patients for dialysis, details of both haemo- and peritoneal dialysis, continuous haemofiltration techniques and complications of end stage renal disease. The book is aimed primarily at trainee nephrologists and renal nurses, but will be of relevance, use and interest to all other health care workers involved with patients with end stage renal disease - pharmacists, dieticians, intensivists, and even medical students! The book has been arranged in sections covering new patients with end-stage renal failure (pre-dialysis), haemodialysis, nursing haemodialysis patients, peritoneal dialysis, nursing peritoneal dialysis patients, nutrition on dialysis, special situations, complications of dialysis, death in dialysis patients, drug use and dosing in renal failure and a summary of the US DOQI and UK Renal Association standards documents. Each section is subdivided so that individual topics appear on single pages where possible. The book is patient centred, practical, and thus didactic.

This is a small dialysis book, but very useful for everyday use. Ideal to be in the pocket of dialysis staff.

This book is a handy primer on dialysis written in simple language and useful for the novice as well as containing nuggets of information useful for the practising renal physician. The book is quite comprehensive as it covers almost all the aspects of dialysis and has good charts for summary of various aspects of dialysis. In short it is a valuable book, an essential aid in the dialysis room and well worth the money spent.
