# Blood Of The Tiger: A Story Of Conspiracy, Greed, And The Battle To Save A Magnificent Species

## Synopsis

Blood of the Tiger takes readers on a wild ride to save one of the worldâ™s rarest animals from a band of Chinese billionaires. Â Many people think wild tigers are on the road to recovery, but they are in greater danger than everâ "from a menace few experts saw coming. There may be only three thousand wild tigers left in the entire world. More shocking is the fact that twice that manyâ "some six thousandâ "have been bred on farms, not for traditional medicine but to supply a luxury-goods industry that secretly sells tiger-bone wine, tiger-skin dÃ©cor, and exotic cuisine enjoyed by Chinaâ™s elite. Â Two decades ago, international wildlife investigator J. A. Mills went undercover to expose bear farming in China and discovered the plot to turn tigers into nothing more than livestock. Thus begins the story of a personal crusade in which Mills mobilizes international forces to awaken the world to a conspiracy so pervasive that it threatens every last tiger in the wild. Â In this memoir of triumph, heartbreak, and geopolitical intrigue, Mills and a host of heroic comrades try to thwart a Chinese cadreâ™s plan to launch billion-dollar industries banking on the extinction of not just wild tigers but also elephants and rhinos. Her journey takes her across Asia, into the jungles of India and Nepal, to Russia and Africa, traveling by means from elephant back to presidential motorcade, in the company of man-eaters, movie stars, and world leaders. She finds reason for hope in the increasing number of Chinese who do not want the blood of the last wild tigers to stain their beloved culture and motherland. Â Set against the backdrop of Chinaâ™s ascendance to world dominance, Blood of the Tiger tells of a global fight to rein in the forces of greed on behalf of one of the worldâ™s most treasured and endangered animals.

If you care about the wild world this book is a must-read. Mills writes of her years in conservation naming names and documenting the political realities behind the mass killing of some of our most charismatic species. The fact that humanity has largely failed in preserving the habitats of our wild neighbors is brought to the fore, as well as the cultural phenomena and illusions that fuel today's poachers and multinational crime syndicates which profit from the decimation of tigers, rhinos, elephants and more. How we got here and how we can change the future make this a hopeful study of what we can actually do to make the world safe for wild life.

While this is a very important story to tell the book lacks intrigue. I was hoping for more stories from the field mixed with the efforts to effect change from the office. This is not a criticism of the author and her motives, just a desire on my part to read about feet on the ground stories from the jungle. We learn the ins and outs of wildlife conservation as played by the big NGOs which can be frustrating for those of us wanting to see more action and less politicking. I recommend the book for anyone interested in how large scale conservation takes place on the international stage. For those more interested in the research end of conservation I would direct you to books authored by Alan Rabinowitz.

A must read for all the pro trade lobbyists who think rhino horn trade should be legalised. J.A. Mills illustrates how China's superpower status and disregard for CITES 's role in endangered wildlife protection needs to be seriously addressed. The South African government is intent on applying to the COP in 2016 to have the rhino horn trade ban lifted. This will give China impetus to reverse its domestic trade bans on tiger and rhino parts. Quite an eye opener to the behind-the-scenes political intrigue of CITES and the lack of political will amongst leaders.

This is a fantastic book by a seasoned conservationist. As a professional wildlife conservationist, I can say that the story gives a great insider's view into how the "sausage gets made", as well as how

conservation as a field is just not succeeding. The biodiversity crisis would certainly be worse without the courageous work of nonprofitters, but nowadays the best outcomes are about holding the line, not dazzling successes. The messy politics that are well documented in Mills book gives some strong reasons why this is so.

As I first opened this book I couldn't put it down. The heart pounding twists on this search to discover the hidden truth on how countries cover up the abuse of power to further the demise of some of our most beautiful creatures is captivating. J. A. Mills writes in a way that touches all of your senses. I could smell the scents and taste what she was describing. It gave me a profound desire to do more, to think more about endangered animals that I have taken for granted would always roam our world. Blood of the Tiger opens your awareness to the truth. Mills give a voice to these magnificent animals.

If you care about tigers this book will teach you more about what is really leading to their demise than anything you have ever read before. Grippingly told by an expert story teller and yet so full of facts, that you will learn more than you thought possible.

This is an excellent book, and a particularly interesting read right now given the increasing international attention to wildlife trafficking. Both an informative exposé and a gripping story, Blood of the Tiger provides incredible insights into the complex forces driving tigers to extinction and what can be done to stop them.

Mills is a veteran of the wildlife trafficking and conservation issues she writes about. Her story is captivating and will leave you fired up to speak out for tigers, elephants and other animals threatened with extinction. In the US we can start by urging Congress to pass the Big Cat Protection Act.
