Global Food Futures: Feeding The World In 2050

Synopsis

By 2050 the world will be faced with the enormous challenge of feeding 9 billion people despite being affected by climate change, rising energy costs and pressure on food growing land and other major resources. How will the world produce 70% more food by 2050 to feed a projected extra 2.3 billion people? What will be the impact of food shortages and high prices on areas in crisis such as sub-Saharan Africa? Where will future production growth come from? And how do we balance the need for environmental protection with sustainable agricultural production methods? This is the first text to present a scholarly, balanced approach to the contentious area of food production and supply up to 2050 - offering a readable and well-informed account which tackles the global food situation in all its totality, from agricultural production, technological advance, dietary concerns, population changes, income trends, environmental issues, government food and agriculture policy, trade, financial markets, macroeconomics and food security. Highly accessible and written by a specialist author with experience as an agricultural analyst, policy advisor and researcher, *Global Food Futures* synthesises the key issues in one volume.

Book Information

Paperback: 264 pages

Publisher: Bloomsbury Academic (September 26, 2013)

Language: English

ISBN-10: 0857851551

ISBN-13: 978-0857851550

Customer Reviews

A phenomenally important book. It pulls together the data to show whether or not agriculture can meet hungry populations in both the short and longer term future. -- Melanie DuPois, Professor in Sociology at the University of California, Santa Cruz, USA In *Global Food Futures*, Brian Gardner sets out to present a scholarly, balanced approach to the contentious area of food production and

supply up to 2050. This text aims to tackle the global food situation in all its totality, from agricultural production, technological advance, dietary concerns, population changes, income trends, environmental issues, government food and agriculture policy, trade, financial markets, macroeconomics and food security. This book introduces the reader to a vast range of inter-disciplinary material to assess the development of future food demand and supply and global food production. -- Elaine Kellman, King's College London LSE Review of Books Global Food Futures is very readable and provides a comprehensive introduction to the wider concerns surrounding agriculture and our ability to feed ourselves in the future. www.sustainablefoodtrust.org

Brian Gardner has been analyzing, writing about and commenting on European and international agriculture and food policy developments for more than thirty years. Notable publications include European Agriculture: Policies, Production and Trade, Growing Pains: New Europe and the CAP in The Perfect Union? New Europe and the EU (edited by Roger Gough) and A Guide to the Reformed CAP.

Interesting, fact filled book for those truly interested in the subject matter.
