Thermodynamics And Statistical Mechanics Of Macromolecular Systems

Synopsis

The structural mechanics of proteins that fold into functional shapes, polymers that aggregate and form clusters, and organic macromolecules that bind to inorganic matter can only be understood through statistical physics and thermodynamics. This book reviews the statistical mechanics concepts and tools necessary for the study of structure formation processes in macromolecular systems that are essentially influenced by finite-size and surface effects. Readers are introduced to molecular modeling approaches, advanced Monte Carlo simulation techniques, and systematic statistical analyses of numerical data. Applications to folding, aggregation, and substrate adsorption processes of polymers and proteins are discussed in great detail. Particular emphasis is placed on the reduction of complexity by coarse-grained modeling, which allows for the efficient, systematic investigation of structural phases and transitions. Providing insight into modern research at this interface between physics, chemistry, biology, and nanotechnology, this book is an excellent reference for graduate students and researchers.

Book Information

Hardcover: 354 pages

Publisher: Cambridge University Press; 1 edition (June 23, 2014)

Language: English

ISBN-10: 1107014476

ISBN-13: 978-1107014473

Product Dimensions: 7.4 x 0.8 x 9.7 inches

Shipping Weight: 2.1 pounds (View shipping rates and policies)

Customer Reviews

Reviewing statistical mechanics concepts and tools necessary for the study of structure formation processes in macromolecular systems, this book provides insight into modern research at this interface between physics, chemistry, biology, and nanotechnology. It is an excellent reference for graduate students and researchers.

Michael Bachmann is Associate Professor in the Department of Physics and Astronomy at the

University of Georgia. His major fields of interest include theoretical physics, computational physics, statistical physics, biophysics, and chemical physics.
