# Hadrosaurs (Life Of The Past)

## Synopsis

Hadrosaurs—also known as duck-billed dinosaurs—are abundant in the fossil record. With their unique complex jaws and teeth perfectly suited to shred and chew plants, they flourished on Earth in remarkable diversity during the Late Cretaceous. So ubiquitous are their remains that we have learned more about dinosaurian paleobiology and paleoecology from hadrosaurs than we have from any other group. In recent years, hadrosaurs have been in the spotlight. Researchers around the world have been studying new specimens and new taxa seeking to expand and clarify our knowledge of these marvelous beasts. This volume presents the results of an international symposium on hadrosaurs, sponsored by the Royal Tyrrell Museum and the Royal Ontario Museum, where scientists and students gathered to share their research and their passion for duck-billed dinosaurs. A uniquely comprehensive treatment of hadrosaurs, the book encompasses not only the well-known hadrosaurids proper, but also Hadrosauoidea, allowing the former group to be evaluated in a broader perspective. The 36 chapters are divided into six sections—an overview, new insights into hadrosaur origins, hadrosaurid anatomy and variation, biogeography and biostratigraphy, function and growth, and preservation, tracks, and traces—followed by an afterword by Jack Horner.

## Book Information

Series: Life of the Past

Hardcover: 640 pages

Publisher: Indiana University Press (November 5, 2014)

Language: English

ISBN-10: 0253013852

ISBN-13: 978-0253013859

Product Dimensions: 8.5 x 1.9 x 11 inches

Shipping Weight: 9.4 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 5 customer reviews

Best Sellers Rank: #714,195 in Books (See Top 100 in Books) #101 in Books > Science & Math > Biological Sciences > Animals > Dinosaurs #307 in Books > Science & Math > Biological Sciences > Paleontology #3732 in Books > Science & Math > Evolution

## Customer Reviews

"[T]he book constitutes a worthy addition to the vast hadrosaurid literature, and will mainly appeal to those that are seriously invested in furthering their knowledge on these animals. The editors and

all authors involved are to be commended for their efforts in producing such an scholarly volume containing a wealth of valuable new information on one of the most remarkable evolutionary radiationsof Mesozoic terrestrial vertebrates." â •Ameghiniana"Hadrosaurs have not had the wide publicity of their flesh-eating cousins, the theropods, but this remarkable dinosaur group offers unique opportunities to explore aspects of palaeobiology such as growth and sexual dimorphism. In a comprehensive collection of papers, all the hadrosaur experts of the world present their latest work, exploring topics as diverse as taxonomy and stratigraphy, locomotion and skin colour."

â •Michael Benton, University of Bristol"Part of the excellent 'Life of the Past' series, [this book] contains much recent information and a thorough analysis of hadrosaur anatomy, particularly as it contributed to hadrosaurs' herbivorous lifestyle.... The 36 chapters are technical, requiring a thorough knowledge of vertebrate anatomy and a general familiarity with dinosaur biology, and prolifically illustrated with clear diagrams and black-and-white photographs. Time devoted to this book will convince any dinosaur student that hadrosaurs were far more than food for tyrannosaurs.... Highly recommended." â •Choice"" â •

David A. Eberth is a senior research scientist at the Royal Tyrrell Museum in Drumheller, Alberta, Canada.David C. Evans is a Curator in Vertebrate Paleontology at the Royal Ontario Museum and an Associate Professor in the Department of Ecology and Evolutionary Biology at the University of Toronto.

An excellent collection of papers on all aspects of hadrosauroid biology. Not for the novice - this is technical literature, and you either need to already know the difference between a quadrate and an ethmoid, an apomorphy and a convergence, or the Maastrichtian and the Campanian, or else be willing to constantly look up terms. But well worth it if you are seriously interested in dinosaurs. There is a helpful foreward by David Weishampel to get you oriented.Paleoartists will be articularly interested in papers on fossilized hadrosaur skin and other soft tissue, and inferences about posture and motion, as well as the osteological descriptions.

Big fan of Dr. Eberth. Great to have papers of this symposium published.

i purchased this for my son who is a paleontologist. He has said that it is excellent and very inspiring for him.

I ordered this for my 14 year old. He really enjoys it.

Best dinosaur textbook I have read to date.
